Hikvision Security and Arc Monitoring

Improving alarm accuracy together

ARC

NSI Gold Approved CCTV Monitoring & Alarm Receiving Centre, Arc Monitoring is a valued partner of Hikvision, supporting its range of CCTV products. The partnership enhances Hikvision's CCTV solutions by giving customers the ability to monitor their security systems remotely through Arc Monitoring.

A CCTV system protects properties and assets with real-time event video together with accurate evidence for law enforcement. This is something conventional sensor-based alarms systems can't do. Additionally, a Hikvision solution can go further; AcuSense technology makes the CCTV systems even more intelligent, recognising whether an alarm was triggered by a person, a vehicle, or another object, based on its Deep Learning algorithm.

Combining Arc Monitoring and Hikvision innovations provide the perfect choice for a cost effective, easy to use and intelligent security system.
